

GitHub Deployment [React]

DATE: ___/___/___
PAGE: ___

- ① create simple github rep
via - github it self
[without any readme
and gitignore files]
- ② git init [in vs code
inside the project folder]
- ③ git add .
- ④ git commit -m "message"
- ⑤ git branch -M main
- ⑥ git remote add origin github rep link
- ⑦ git push -u origin main

Deployment

- ① npm install gh-pages save-dev
- ② in vite.config.js file
add
{ plugin: [react()],
 base: "/RepName/" }

③ — in package.json file add

we have
to add
these two

① → "homepage": "http://umeshverma.github.io/repoName"

"scripts": {

② → "deploy": "gh-pages -d dist"

}

④ npm run build

⑤ npm run deploy

for any updates

updates
the file
and code

① usual git pull, add, commit -m, push, etc

② then, npm run dev
npm run deploy.

updates
the deployed
page
